Preface vii

Symposium organization ix

Reviewers xi

Keynote presentation

Current status and future trends in computational wind engineering
S. Murakami (Tokyo, Japan) 3

Bluff body aerodynamics

Discrete vortex model of flow over a square cylinder
D.J. Bergstrom, J. Wang (Saskatoon, Canada) 37
Generation of velocity fluctuations for inflow boundary condition of LES
K. Kondo, S. Murakami (Tokyo, Japan), A. Mochida (Niigata, Japan) 51
Calculation of the flow past a surface-mounted cube with two-layer turbulence models
D. Lakehal, W. Rodi (Karlsruhe, Germany) 65
Unsteady aerodynamic force prediction on a square cylinder using k–ε turbulence models
S. Lee (Daejeon, South Korea) 79
Numerical study of blockage effects on aerodynamic characteristics of an oscillating rectangular cylinder
A. Okajima, D. Yi, A. Sakuda, T. Nakano (Ishikawa, Japan) 91
Stably stratified flow around a horizontal rectangular cylinder in a channel of finite depth
S. Ozono, N. Aota, Y. Ohya (Kasuga, Japan) 103
A critical study on the influence of far field boundary conditions on the pressure distribution around a bluff body
S. Parameswaran (Lubbock, USA), R. Andra, R. Sun, M. Gleason (USA) 117
Finite element modelling of flow around a circular cylinder using LES
R.P. Selvam (Fayetteville, USA) 129
Three-dimensional vortical flows around a bluff cylinder in unstable oscillations
T. Tamura, Y. Itoh (Yokohama, Japan) 141
Development of a parallel code to simulate skewed flow over a bluff body
T.G. Thomas, J.J.R. Williams (London, UK) 155
Development of a new k–ε model for flow and pressure fields around bluff body
M. Tsuchiya, S. Murakami (Tokyo, Japan), A. Mochida (Niigata, Japan), K. Kondo, Y. Ishida (Tokyo, Japan) 169
Two dimensional discrete vortex method for application to bluff body aerodynamics
J.H. Walther, A. Larsen (Lyngby, Denmark) 183
Numerical simulation of flow around rectangular prism
D. Yu, A. Kareem (Notre Dame, USA) 195

Keynote presentation

A fluid mechanicians view of wind engineering: Large eddy simulation of flow past a cubic obstacle
K.B. Shah, J.H. Ferziger (Stanford, USA) 211

Bridge aerodynamics

Fatigue strength design for vortex-induced oscillation and buffeting of a bridge
M. Hosomi (Chiba, Japan), H. Kobayashi (Kusatsu, Japan), Y. Nitta (Chiba, Japan) 227

Elsevier Science B.V.

Numerical simulation of flow around a box girder of a long span suspension bridge
S. Kuroda (Tokyo, Japan) 239
Aeroelastic analysis of bridge girder sections based on discrete vortex simulations
A. Larsen, J.H. Walther (Lyngby, Denmark) 253
Prediction of vortex-induced wind loading on long-span bridges
S. Lee, J.S. Lee, J.D. Kim (Daejeon, South Korea) 267

Vehicle aerodynamics and dispersion

Numerical simulation of air flow in an urban area with regularly aligned blocks
P. He (Ibaraki, Japan), T. Katayama, T. Hayashi (Fukuoka, Japan), J. Tsutsumi (Okinawa, Japan), J. Tanimoto, I. Hosooka (Fukuoka, Japan) 281
Car exhaust dispersion in a street canyon. Numerical critique of a wind tunnel experiment
B.M. Leitl, R.N. Meroney (Fort Collins, USA) 293
An investigation of the ventilation of a day-old chick transport vehicle
A.D. Quinn (Bedfordshire, UK), C.J. Baker (Nottingham, UK) 305
The effect of wind profile and twist on downwind sail performance
P.J. Richards (Auckland, New Zealand) 313

Structural response

Numerical study on the suppression of the vortex-induced vibration of a circular cylinder by acoustic excitation
S. Hiejima (Fukuoka, Japan), T. Nomura, K. Kimura, Y. Fujino (Tokyo, Japan) 325
Improvement of pitching moment estimation of an oscillating body by discrete vortex method
F. Nagao, H. Utsunomiya (Tokushima, Japan), S. Murata (Yokohama, Japan) 337
Unsteady pressure evaluation on oscillating bluff body by vortex method
H. Shirato, M. Matsumoto (Kyoto, Japan) 349

Keynote presentation

Use of meteorological models in computational wind engineering
R.A. Pielke Sr., M.E. Nicholls (Fort Collins, USA) 363

Terrain aerodynamics

Flow and dispersion over hills: Comparison between numerical predictions and experimental data
D.D. Apsley, I.P. Castro (Guildford, UK) 375
Cellular convection embedded in the convective planetary boundary layer surface layer
D.S. DeCroix, Y.-L. Lin, D.G. Schowalter (Raleigh, USA) 387
Flow separation and hydraulic transitions over hills modelled by the Reynolds equations
K.J. Eidsvik, T. Utnes (Trondheim, Norway) 403
On the flow around a vertical porous fence
F.-M. Fang, D.Y. Wang (Taichung, Taiwan) 415
Application of k–ε model to the stable ABL: Pollution in complex terrain
A. Huser, P.J. Nilsen, H. Skåtun (Høvik, Norway) 425
A numerical study of the wind field in a typhoon boundary layer
Y. Meng, M. Matsui, K. Hibi (Tokyo, Japan) 437
Statistical-dynamical downscaling of wind climatologies
H.-T. Mengelkamp, H. Kapitza (Geesthacht, Germany), U. Pflüger (Offenbach, Germany) 449
CFD analysis of mesoscale climate in the Greater Tokyo area
A. Mochida (Niigata, Japan), S. Murakami, T. Ojima, S. Kim, R. Ooka, H. Sugiyama (Tokyo, Japan) 459

On the validation of high-resolution atmospheric mesoscale models
K.H. Schlünzen (Hamburg, Germany) 479
A numerical study of stably stratified flows over a two-dimensional hill: Part I. Free-slip condition on the ground
T. Uchida, Y. Ohya (Kasuga, Japan) 493

Keynote presentation

Computational wind engineering: Past achievements and future challenges
T. Stathopoulos (Montreal, Canada) 509

Building aerodynamics

Numerical considerations for simulations of flow and dispersion around buildings
I.R. Cowan, I.P. Castro, A.G. Robins (Guildford, UK) 535
A numerical study of wind flow around the TTU building and the roof corner vortex
J. He, C.C.S. Song (Minneapolis, USA) 547
Wind-driven rain distributions on two buildings
A. Karagiozis, G. Hadjisophocleous, S. Cao (Ottawa, Canada) 559
Chained analysis of wind tunnel test and CFD on cross ventilation of large-scale market building
S. Kato, S. Murakami, T. Takahashi, T. Gyobu (Tokyo, Japan) 573
Improved turbulence models for estimation of wind loading
S. Kawamoto (Chiba, Japan) 589
Large-eddy simulation of wind effects on bluff bodies using the finite element method
S. Lee, B. Bienkiewicz (Fort Collins, USA) 601
Suppression of flow-induced oscillations using sloshing liquid dampers: analysis and experiments
V.J. Modi, M.L. Seto (Vancouver, Canada) 611
On the application of Thomson's random flight model to the prediction of particle dispersion within a ventilated airspace
A.M. Reynolds (Bedford, UK) 627
Full-scale measurements and computational predictions of wind loads on free-standing walls
A.P. Robertson, R.P. Hoexy (Bedford, UK), P.J. Richards (Auckland, New Zealand), W.A. Ferguson (Watford, UK) 639
Computation of pressures on Texas Tech University building using large eddy simulation
R.P. Selvam (Fayetteville, USA) 647
Application of computational techniques for studies of wind pressure coefficients around an odd-geometrical building
S.-H. Suh, H.-W. Roh (Taejon, South Korea), H.-R. Kim (Seoul, South Korea), K.-Y. Lee (Kyonggi-do, South Korea), K.-S. Kim (Seoul, South Korea) 659
Numerical prediction of wind loading on buildings and structures – Activities of AIJ cooperative project on CFD
T. Tamura (Yokohama, Japan), H. Kawai (Saitama, Japan), S. Kawamoto (Chiba, Japan), K. Nozawa, S. Sakamoto (Tokyo, Japan), T. Ohkuma (Yokohama, Japan) 671
The assessment of wind loads on roof overhang of low-rise buildings
T. Wiik (Narvik, Norway), E.W.M. Hansen (Trondheim, Norway) 687
An efficient wind field simulation technique for bridges
W.W. Yang, T.Y.P. Chang, C.C. Chang (Hong Kong, China) 697

Air pollution

A resistance approach to analysis of natural ventilation airflow networks
R.M. Aynsley (Townsville, Australia) 711
Numerical and wind tunnel simulation of gas dispersion around a rectangular building
D. Delaunay (Nantes, France), D. Lakehal (Karlsruhe, Germany), C. Barré, C. Sacré (Nantes, France) 721

Modelling particulate dispersion in the wake of a vehicle
Z.E. Hider, S. Hibberd, C.J. Baker (Nottingham, UK) 733
Concentration and flow distributions in the vicinity of U-shaped buildings: Wind-tunnel and computational data
B.M. Leitl (Fort Collins, USA, Hamburg, Germany), P. Kastner-Klein, M. Rau (Karlsruhe, Germany), R.N. Meroney
(Fort Collins, USA) 745
Numerical evaluation of wind-induced dispersion of pollutants around a building
Y. Li, T. Stathopoulos (Montreal, Canada) 757
Numerical study of atmospheric dispersion under unstably stratified atmosphere
C.H. Liu, D.Y.C. Leung (Hong Kong, China) 767
The use of the MERCURE CFD code to deal with an air pollution problem due to building wake effects
D. Moon (Shoreview, USA), A. Albergel, F. Jasmin (Colombes, France), G. Thibaut
(Paris, France) 781
A numerical study of a thermally stratified boundary layer under various stable conditions
Y. Ohya, H. Hashimoto, S. Ozono (Kasuga, Japan) 793
Numerical simulation of pollutant dispersion around a building using FEM
R.P. Selvam (Fayetteville, USA) 805
Computational modelling in the prediction of building internal pressure gain functions
R.N. Sharma (Suva, Fiji), P.J. Richards (Auckland, New Zealand) 815
CFD prediction of gaseous diffusion around a cubic model using a dynamic mixed SGS model based on composite grid technique
Y. Tominaga (Niigata, Japan), S. Murakami (Tokyo, Japan), A. Mochida (Niigata, Japan) 827
A vertical round jet issuing into an unsteady crossflow consisting of a mean current and a sinusoidal fluctuating component
L.P. Xia, K.M. Lam (Hong Kong, China) 843

Lab methodology and validation

Turbulence control in multiple-fan wind tunnels
A. Nishi, H. Kikugawa, Y. Matsuda, D. Tashiro (Miyazaki, Japan) 861
Application of infrared thermography and a knowledge-based system to the evaluation of the pedestrian-level wind environment around buildings
R. Sasaki (Yamato, Japan), Y. Uematsu, M. Yamada, H. Saeki (Sendai, Japan) 873
Some remarks on the validation of small-scale dispersion models with field and laboratory data
M. Schatzmann, S. Rafailidis, M. Pavageau (Hamburg, Germany) 885

New computational schemes

Turbulence closure model "constants" and the problems of "inactive" atmospheric turbulence
M. Bottema (Haren, The Netherlands) 897
Determination of plume capture by the building wake
M.A. Brzoska (Cheney, USA), D. Stock, B. Lamb (Pullman, USA) 909
Simulating the dynamics and spray droplets in the atmosphere using ballistic and random-walk models combined
M.L. Mokeba, D.W. Salt, B.E. Lee, M.G. Ford (Portsmouth, UK) 923

Appendix
Abstracts of papers presented but not published

Wind-induced response of double articulated towers
S. Ahmad, N. Islam, N.A. Siddiqui (New Delhi, India) 937

Forecasting roof snow accumulation using numerical models
A. Baskaran, A. Kashef (Ottawa, Canada) 938
Simulation of unsteady flow around oscillating bluff bodies using a hybrid Eulerian Lagrangian scheme
P.S. Brar, O.M. Knio, R.H. Scanlan (Baltimore, USA) 940
Complex terrain surface wind field modeling
E.D.H. Cheng, J. Shang (Honolulu, USA) 941
Computer simulation of the dynamic response of wind-loaded large bridges under limit load conditions
I. Kovàcs, K. Beyer (Stuttgart, Germany), N. Oba (Tokyo, Japan) 942
Wind speed distribution over the bay by the numerical solution of the 3D Navier–Stokes equation
K. Kushioka, T. Saito, A. Hondo (Nagasaki, Japan) 943
Numerical simulation of flow over two successive buildings of square cross-section
S.K. Maharana (Talcher, India), A.K. Ghosh (Kharagpur, India) 944
Wind induced vibrations of bell-towers. An experimental procedure to find vibration frequencies and test simulation based on wind engineering
A. Nappi (Trieste, Italy), F. Pedrielli (Ferrara, Italy), M. Pian (Trieste, Italy) 945
Prediction of large-scale wind field over complex terrain by finite element method
T. Nomura (Tokyo, Japan) 947
A boundary element-finite difference formulation for wind flow simulation
O.U. Onyemelukwe (Orlando, USA) 949
Navier–Stokes' solutions for a pair of circular cylinders
S. Purohit, G. Chafle, N. Khurana, S. Narayanan (Pune, India) 950
Effect of wind environment on the response of buildings in Oman
M. Qamaruddin, S.K. Al-Oraimi (Al-Khod, Oman) 951
Multigrid methods for computational wind engineering
R.P. Selvam (Fayetteville, USA) 952
Parallel performance of a three-dimensional grid-free vortex method for wind engineering simulations
G. Turkiyyah, D. Reed, C. Viozat, C. Lin (Seattle, USA) 953
A multigrid method and high-order discretisation for turbulent flow over a building
N. Wright (Nottingham, UK) 955

Discussions

Discussions of bluff body aerodynamics 959
Discussions of bridge aerodynamics 962
Discussions of vehicle aerodynamics and dispersion 966
Discussions of structural response 969
Discussions of terrain aerodynamics 970
Discussions of building aerodynamics 974
Discussions of air pollution 981
Discussions of lab methodology and validation 984
Discussions of new computational schemes 986
Discussions of the appendix 988
